# NICE TO KNOW

## BRUSH TYPES

**The range contains different types of brushes:**

- Side broom
- Main broom
- Rotary brush or “side scrubber”
- Cylindrical scrubber or “main scrubber”
- Pad driver

**Below you can find the explanation of each type of brush.**

### SIDE BROOM

The purpose of a side broom is to throw debris out in front of the sweeper so that the main broom can pick it up.

### MAIN BROOM

The main broom is built around a heavy-duty core, with staple-set tufts aligned in spiral rows. This design places bristles on the floor at all times to increase vacuum efficiency and improve particles.

### ROTARY BRUSH OR “SIDE SCRUBBER”

A rotary brush or “side scrub” is designed to spin and loosen debris from the ground with its dense and stiff bristles.

### CYLINDRICAL SCRUBBER OR “MAIN SCRUBBER”

A cylindrical scrubber or “main scrubber” uses a full-fill design that keeps bristles on the floor at all times and guides the solution to the centre of the scrubbing path as the bristles loosen the debris from the ground. The filament length on this brush designates it as a “scrubber” since the short bristle is not able to “flick” or “sweep” the debris off the ground.

### PAD DRIVER

The pad driver is set with stiff 1/2” long polypropylene bristles, unevenly trimmed and widely spaced to firmly grip scrubbing pads.

## ROW PATTERNS

**We also offer different types of row patterns:**

- Single row
- Double row
- Patrol brush (V-pattern)

**You can discover the differences between the row patterns below.**

### SINGLE ROW

The single row pattern is ideal for sweeping applications in dusty and/or sandy conditions. It is also referred to as the full-fill or high-density pattern. This pattern is designed to pick up fine debris, but not bulky items.

### DOUBLE ROW

Because of its versatility, the double row pattern is the most popular pattern for sweeping applications. This design allows the space between each row to trap bulky items while the bristles are working to pick up the finer debris such as dust and sand.

### PATROL BRUSH (V-PATTERN)

The patrol brush has a V-pattern and is designed primarily for high-speed sweeping in large areas. Designed with fewer rows with more tufts per row, there is more space between rows. This enables the brush to effectively pick up medium to large debris such as cans, paper and leaves at higher speeds.

## TYPES OF BRUSH MATERIALS

**The types of brush can consist of several materials:**

- Nylon
- Polypropylene
- Proex
- (Steel) wire
- Union fibre
- Grit

**See below to find out which material is best for you.**

### NYLON

Nylon is a highly productive filament with an excellent brush life in dry sweeping conditions. It performs well on rough surfaces and in high-temperature environments because of its durability and high melting point. The smaller the grit size the more aggressive the scrubbing. Characteristics in most applications: excellent lifespan, good wear-resistance, low to moderate absorption of water (3% to 9%) leading to only a temporary reduction in stiffness, excellent bend recovery rate, resistance to most common solvents and suitable for use in weak acids.

### POLYPROPYLENE

As the most popular filament in scrubbing applications, poly is efficient for use with most soils and surfaces. Although poly is more economical than nylon, it is not recommended for sweeping high-temperature debris.

### PROEX

Proex is highly efficient as an all-purpose filament for indoor and outdoor sweeping applications, including damp or humid environments. It is not recommended for high-temperature sweeping applications. Its name is derived from the X-shape of the bristle.

### (STEEL) WIRE

(Steel) wire is highly durable, but is also the most abrasive material. Wire is not fit for every surface because of its abrasiveness. Steel wire is most appropriate for work on steel and iron work pieces, but may also be used on wood, aluminium, brass and copper.

### UNION FIBRE

Comprised of a mixture of Tampico and Palmyra fibres, this material is highly efficient for dust control and sweeping fine debris. As a natural fibre, Union has a relatively shorter wear lifespan compared to other synthetic materials.

### GRIT

Grit is nylon filament impregnated with silicon carbide particles. Grit filaments are offered in .070"/46, .050"/80, .035"/180, .022"/120, .018"/500. The first number is the filament diameter. The larger the diameter, the stiffer the bristle. The second number is the particle size. The smaller the grit number, the more aggressive the scrubbing. Grit brushes reduce/eliminate the need for black stripping pads. Long lifespan and great performance.

## TYPES OF SQUEEGEE MATERIAL

**Squeegees consist of two types of material:**

- Polyurethane
- Gum rubber

**Discover the best material for your scrubber or sweeper below.**

### POLYURETHANE

Polyurethane squeegees are chemical-resistant. They work very well on industrial flooring such as old warehouse floors or other rough and uneven floors. Polyurethane squeegees have a higher lifespan than gum rubber.

### GUM RUBBER

Gum rubber squeegees work well on smooth or tiled surfaces, such as shopping mall floors. Gum rubber squeegees ensure maximum water collection on smooth surfaces, leaving them dry and safe for pedestrians. Not recommended for oily environments. Gum rubber absorbs oil and the material will begin to lose its structural integrity, becoming very wavy, as a result of which the cleaning ability will deteriorate.

## FILTERS

### **Paper filters:**

- Filtering dust in dry applications
- Non-washable

### **Synthetic filters:**

- Filtering dust in damp, high humidity or even wet applications
- Washable

### **Oil, air & hydraulic filters:**

- Complete filter kits available
- Complete range of heavy-duty filters
- Filters for intensive use

Save a lot of time and work by using the SmartSweep

- Mechanical sweeper: can be used on diesel, LPG and electric lift trucks
- Designed for in- and outdoor use (dry conditions)
- Collects dirt and rocks

**Technical information:**

- Sweeping width: 1524 mm
- Main brush width: 965 mm
- Main brush diameter: 305 mm
- Side brush diameter: 458 mm
- Waste collector capacity: 400 kg

- Waste collector content: 255 litres
- Pneumatic tyres: 136 x 464 mm
- Maximum fork dimensions: (W x T x L): 230 mm x 80 mm x length unrestricted
- Maximum fork spread measured over the forks: 510 mm
- Outside sweeper dimensions: (W x L x H): 1524 x 1749 x 936 mm
- Weight: 473 kg

**REF 101SG5424**

**REF 101SG5427**

You can also equip your SmartSweep with a bumper kit:

**REF 101SG5427**

This way you not only protect your SmartSweep but also your warehouse.

**The bumper kit consists of 3 bumpers:**

- 2 x REF 101SG5425
- 1 x REF 101SG5426

You can easily and quickly attach the bumpers by means of powerful magnets.

**REF 101SG5425**

**REF 101SG5426**

HYDRO SWEEPER

Your ideal partner for dust-free cleaning

**Properties:**

- Cylindrical brush fully enclosed: dust-free sweeping guaranteed
- Integrated main and side brush drive
- Main cylindrical brush (1550 mm sweeping width), pendulum suspension
- V-shaped cylindrical brush (better filling of the waste collector)
- All functions can be operated by 1 double-acting valve

**Technical information:**

- Width: 1550 mm
- Diameter side brush: 530 mm
- Weight: 390 kg
- Operating pressure: maximum 180 bar
- Oil flow: minimum 15 litres/minute

Description	REF
With waterjet system 12 V	<a href="#">101SG5428</a>
With waterjet system 24 V	<a href="#">101SG5429</a>
Without waterjet system	<a href="#">101SG5852</a>

The Hydro Sweeper is an attachment for your lift truck that you can use to clean your floor by means of a waterjet system. You can easily and quickly fit it onto most lift trucks. The bristles are also hydraulically driven and the waste collector is hydraulically emptied.

**Side brush**

- Folding
- Material: polypropylene
- Diameter: 600 mm

**3-dimensional floating suspension**

- Max fork section: 165 x 55 mm
- Min distance between the forks: 380 mm

**Water tank 200 l**

5 waterjets

All replacement parts available.

MINI SWEEPER

Active cleaning with this compact manual sweeper

**Properties:**

- Easy to operate
- Collects various types of dust and debris: paper, stone, wood, glass, leaves ...
- Application areas: apartments, car parkings, fuel stations, industries, plants and township roads, warehouses ...
- The side brush thoroughly sweeps the dirt from corners and borders directly into the path of the wide cylindrical brush
- The dirt collector bin is easy to remove
- The position of the handle can be adjusted thanks to its ergonomic design
- Borders and stairs are not a problem thanks to the large wheels at the rear of the machine

**Technical information:**

- Sturdy, durable and lightweight
- Sweeping width (without/with side brush): 460/650 mm
- Sweeping capacity: 2600 m<sup>2</sup>/h
- Collector bin volume: 40 l
- Weight: 26 kg
- Width (without/with side brush): 725/785 mm
- Length (without/with side brush): 800/1000 mm
- Height (without/with handle): 400/1020 mm

**REF 101SG5867**

Get started with the practical Mini Sweeper for small in- and outdoor areas.

All replacement parts available.

MAXI SWEEPER

**Efficient cleaning with the Maxi sweeper for your Manitou telehandler**

**Properties:**

- Built-in hydraulic motor
- Based on a galvanised collector bin with a blade made of wear-resistant HB400 which easily scrapes off sticky soil
- High collection capacity
- Easy to empty by tipping the collector bin
- Height adjustment of the sweeper brush by means of 2 adjustable supports inside the collector bin
- Brush made of synthetic material or mixed synthetic/steel

**Technical information:**

**Type 1:**

Brush material: synthetic

**Type 2:**

Brush material: mixed synthetic/steel

SB/SBE/SBX CONNECTORS

Nice to know

- Single piece housings of impact-resistant polycarbonate offer both high physical strength and superior dielectric properties
- Silver-plated solid copper contacts offer low resistance for superior conductivity
- Self-cleaning contact design resists arcing by keeping conductive surfaces clean and free of corrosion
- Contacts have flared and heat-treated barrels which readily accept fine stranded wire and allow easy, quality crimping
- Integral stainless steel springs maintain constant pressure on the contact to guarantee a consistent, low-resistance connection
- Neutral (male = female)

Voltage color code:

- Mechanical keys molded in connectors will engage only with connectors of the same color
- This color code given for various voltages is only a suggestion

HIGH-FREQUENCY CHARGERS

**Why choose a HF charger?**

- Maximum energy saving
- Longer total battery life
- Greater total cycle life
- Reduced battery heating
- Reduced charging times
- Lower water consumption
- Reduced labour and need for water
- Optimised charge curves
- Thermal compensation
- Superior safety and self-protection
- Minimised weight and size

**General information:**

- Operating temperature: -20 °C to 50 °C
- Output short circuit protection
- Reverse polarity protection
- Audible alarm system
- Automatic thermal compensation

**HF battery chargers feature state-of-the-art HF technology:**

- Coated printed circuit boards
- Metal case and self-extinguishing ABS
- Weight and size are minimised
- Adaptable to every use and very flexible
- All HF battery chargers are microprocessor-controlled and internally protected against overload, short circuit, incorrect battery connection and transient voltages
- Thanks to internal selector switches, the chargers can be adjusted to a wide range of battery capacities
- HF battery chargers operate at 85–90% efficiency, resulting in a maximum saving of electric power cost
- With the thermal sensor option, the charger's output electronically compensates the gasification voltage according to the battery temperature
- CE-certified (in conformity with EC directive 89/336/EEC regarding electromagnetic compatibility)

**18-months warranty on all charger parts!  
We stock over 90% of charger spare parts.**

HF MULTIVOLTAGE BATTERY CHARGER

This High Frequency Multivoltage battery charger with CAN BUS is a fully digital device with a double function: constant current generator and battery charger, with CAN BUS interface. Versatility, efficiency and on-the-spot service are its fundamental strengths, combined with the innovative features of CAN BUS chargers: the "flash" microprocessor enables a high calculation power and huge storage capacity, the regulation of all charging features with only one button and the possibility to view historical data concerning previous charge cycles.

**AS CURRENT GENERATOR:** allows recovery of sulphated or completely discharged batteries.

Using MODE button, a constant current charge can be sustained for a long period of time, achieving desulphation of batteries.

**AS BATTERY CHARGER:** allows the recharging of batteries from 2 to 96 V nominal, with adjustable current from 0 to 50 A, and selectable time from 1 to 100 hours.

- Charger weighs only 9 kg and is easy to move.
- This unit can be used for on-site assistance, providing improved charging of any battery or replacement of any old charger that may have failed.

## BUILT-IN CHARGERS

### Key features:

- Possibility to change the charging curve by means of DIP switches, choosing from 16 standard preprogrammed curves for lead-acid, gel and AGM batteries. Any other curve is available on request for all types of batteries (Li-ion and Li-po included)
- High-frequency system with advanced technology
- Efficiency > 90%
- Charging process fully controlled by microprocessor
- Visualisation on a lit display: the charging current, the battery voltage, the charging time, the charge supplied in Ah and the energy absorbed in kWh
- Compensation of the voltage drop on the connecting cables to the battery
- Protection against polarity inversions, short circuits, over-voltages or anomalies
- Equipped with NC (normally closed) relay for safety interlock connections (available only for on-board installation)
- Ingress Protection Rating IP30 with forced ventilation
- Remote 3-LED (red, yellow and green)
- The information relevant to the last 30 charging cycles (the duration of the charging cycle, the Ah's delivered by the battery, the voltage at the end of the charging process and the possible error messages) can be downloaded in an Excel file by means of a cable and specific software, which are available as an option

BATTERY REGENERATOR

Speaking about battery maintenance, diagnostics and regeneration, we find that this is somewhat of a complicated subject for many people. If you want to properly analyse and maintain your batteries and if necessary, restore their capacity, it consumes a lot of time. Various questions arise: is this even possible? Doesn't this take up too much time and isn't this too labour intensive? Don't we need specialised battery engineers for that? Does it even work?

Our answer is YES, the REPLUS technology is the most professional and easy-to-use piece of equipment available on today's market! It's fast, accurate, efficient, practically effortless and it provides fully detailed reports on the battery condition, before and after + analysis of the battery; even down to cell level!

**The Energetic Plus battery regenerator is a proven technology, which we have sold in more than 75 countries and which is used by more than 1000 customers.**

**The Energetic Replus battery regenerator** ensures a quick regeneration and expands the life span of the batteries significantly. This process is fully automatic and doesn't require any special attention since the entire process is temperature-controlled and fully monitored by software. After 30-40 hours the regenerator will have finished the entire operation which consists of 2 complete charge and discharge cycles specifically designed to desulphate your battery completely.

Battery regeneration is very popular. 80% of the batteries that break down and lose their capacity are sulphated, but these can be restored with the right equipment. If your battery is maintained properly, it can easily be used for another 2-3 years..

With minimum maintenance costs and only the highest quality components used during the production, the regenerator is an investment that only brings benefits for your business.

You will be able to analyse your batteries like you have never done before, no stone will be left unturned... If used in combination with our BMS technology, the Replus regenerator will analyse your battery down to cell level, after which the recovery mode will start automatically and it will completely desulphate your battery. Once it is finished you can print out the fully detailed report on the battery condition before and after. Don't wait any longer, stop wasting valuable money and get the best out of your batteries with **Energetic Plus**.

## ENERGIC REPLUS BATTERY REGENERATOR

Expand the lifespan of your batteries: restore your sulphated batteries by the electrical high frequency pulsation process of the battery regenerator.

### Regenerate your sulphated batteries:

Battery regeneration is very popular. **80% of the batteries breaking down and losing capacity are sulphated, but can be restored with the right equipment.** Our Energic Replus battery regenerator successfully replaces sulphation by active material thanks to an electrical high-frequency pulsation process. This process restores the battery capacity, giving you the ability to reuse old and sulphated batteries. You can also use the battery regenerator for annual maintenance to considerably prolong the lifespan of your batteries. The battery regenerator can be used in every lead-acid-based battery: starter batteries, stationary batteries, traction and semi-traction batteries, Ni-Cad batteries ...

### What is sulphation?

During use, small sulphate crystals form, but these are normal and not harmful. During prolonged charge deprivation however, the amorphous lead sulphate converts to a crystalline form that deposits on the negative plates. This leads to the development of large crystals, which reduce the battery's active material that is responsible for high capacity and low resistance. Sulphation also lowers the charge acceptance.

**This lead sulphate increases internal resistance and decreases the specific gravity of the electrolyte. The process of sulphation build-up is unavoidable. Worse yet, after 3-4 years the process accelerates substantially. Batteries sulphate due to a mix of reasons:**

- The battery was inactive for too long
- The battery was discharged too deeply
- The wrong charger was used
- A bad cell was left untreated
- The battery has reached too high/low temperatures
- The charge cycles weren't observed

### Advantages of using the battery regenerator:

- Combination of battery discharger and battery charger, all combined into 1
- Detailed test reports
- Minimum maintenance cost
- Extended lifespan of batteries
- Quick regenerations
- Free analysing software
- Automation program applied
- 18-month warranty
- CE-certified, MET-certified (US market)
- Wireless connection between regenerator and computer
- Possibility to monitor the regenerator process on smartphone or laptop (within local network)

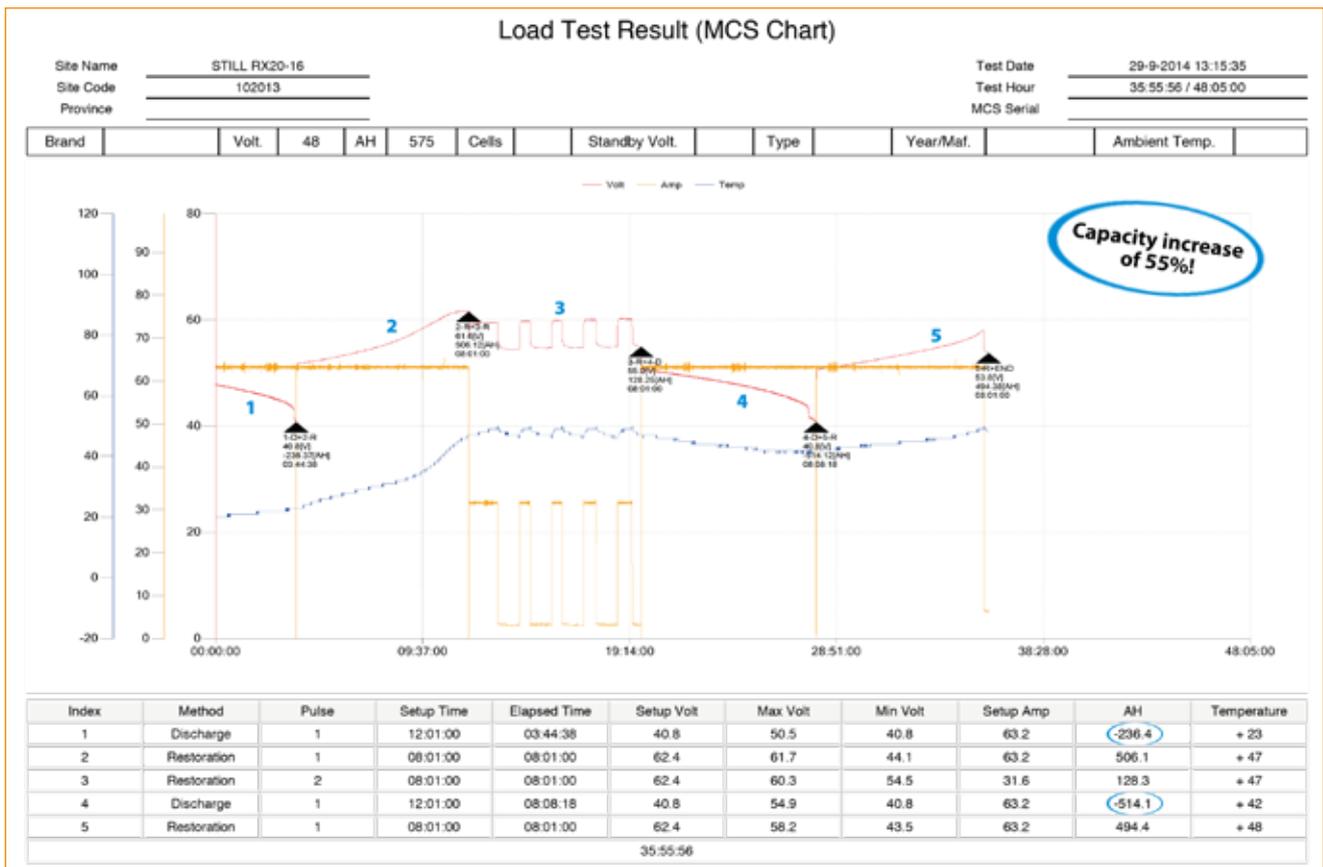

## ENERGIC REPLUS BATTERY REGENERATOR

### Regeneration reports:

The Replus software allows you to create fully detailed reports in PDF, WORD or Excel which give you an excellent idea of the condition of the battery prior and after the process. This is how you should interpret the below report: when you compare 1 and 4, you can see that the time needed to discharge the battery is much longer in step 4. This is a direct result of the restoration in mode 2 and 3. When comparing step 5 to step 2, you can see that the set battery voltage is reached much later than in step 2. This means that your battery lasts longer and has been restored to a good condition.

### This curve shows a complete battery maintenance process:

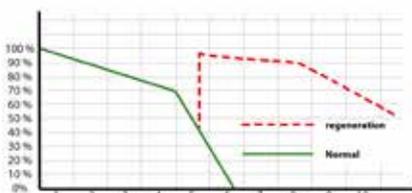

- 1 Discharge
- 2 Restoration charging
- 3 Cooling
- 4 Equalization charge
- 5 Discharge
- 6 Restoration

### 2 ways to use the battery regenerator

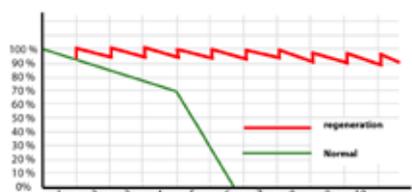

#### Reconditioning regeneration

Reconditioning regeneration allows you to restore old (5, 6, 7 ... years), medium to well-maintained batteries that have 'silted up' as a result of natural sulphation, to a 90-100% productivity.

#### Maintenance regeneration

Maintenance regeneration allows you to keep your battery in optimal, sulphate-free condition, by means of a short yearly regeneration.

**ENERGIC REPLUS BATTERY REGENERATOR**

Multi-purpose all in one battery tester, analyser and desulphation unit, multi voltage with a wide capacity range, which will automatically switch between discharging, charging/restoration in order to get the maximum life out of your batteries. Professional workshop equipment for the battery professional. Comes with free training at your location. When used in combination with our BMS system you will get detailed reports on overall battery condition as well as individual cell condition. The most complete battery maintenance system available on today's market.

**Specifications:**

**BMS SYSTEM: WIRELESS DETECTION OF BAD CELLS**

A battery bank consists of a number of cells/batteries connected in series. The BMS system will provide you with professional and individual voltage measurements of all cells during a complete discharge, **offering you a perfect evaluation of the battery**. Ordinary capacity systems only display the total voltage and capacity of the battery, but never the results of the individual cell. With this BMS you get a clear overview of the performance of each cell, allowing you to make an exact evaluation.

**The BMS system offers:**

- Duration test during the entire discharge / regeneration process
- Real-time monitoring
- Analysis function by means of the supplied software
- No tangled up wires thanks to the easy wireless connection
- Crystal-clear overview of the battery capacity
- Can be synched with the Replus regenerator

The system consists of a number of voltage detectors that is equal to the number of cells. The sensors transfer the voltage of each cell to the receiver (best to be performed during A COMPLETE discharge process). The receiver – connected to a PC – collects the data.

If you use this system in combination with our new D1007h battery discharger or Battery Regenerator REPLUS you will be able to detect the faulty element and increase the battery’s capacity.

Thanks to the **software program** that is supplied with the sensors, you can now easily detect which element is no longer keeping its charge and needs to be replaced or regenerated. The software checks the actual voltage of each sender every 3 minutes and stores this value in a table. Colour codes continuously indicate the charge condition of each cell (empty to full), as a result of which the performance curves are very detailed.

Free analysing software and indication of the bad element.

BMS SYSTEM: WIRELESS DETECTION OF BAD CELLS

Synched regeneration report of REPLUS + BMS system

If you combine the regenerator with the BMS system, then it can be controlled by 1 software package that gives you all the info you need to have a fully detailed view on the condition of your battery down to cell level, during a complete load test. On this particular graph it is clear that the battery has **2 weak cells that need to be replaced**.

With just 2 clicks you can create these fully detailed reports which you can then easily save as a PDF, Word or Excel file. Professional information that will give you a full understanding of the battery. These reports can be used to inform the customer on the current condition of this battery or can be kept as a track record of the condition of your own batteries.

FLUKE 279FC THERMAL MULTIMETER

The 279 FC is a full-featured digital multimeter with integrated thermal imaging. Thermal imaging multimeters are a first-line troubleshooting tool for electrical equipment that can check hot spots on high-voltage equipment and transformers, detect heating of fuses, wires, insulators, connectors, splices and switches.

**Features:**

- Full-featured multimeter with built-in thermal imager, -10 °C to 200 °C
- 15 measurement functions including: AC voltage 0.1 mV to 1000V with low-pass filter, DC voltage 0.001 V to 1000V, resistance 0.1 Ω to 50 MΩ, continuity, capacitance, diode test, min/max/avg, AC current (with iFlex), frequency
- Thermal imaging quickly and safely reveals many electrical issues, eliminating the need for time-consuming testing and validation
- iFlex enables you to measure current measurements (up to 2500 AC) more easily in tight, hard-to-reach spaces
- Designed for durability, built to withstand a 3 m drop, double insulated with raised rubber holster for increased protection
- Save measurements and images while communicating wirelessly with a smartphone up to 6.1 m away
- Image resolution 80 x 60
- Full-color 3.5"/8.89 cm LCD screen provides clean, crisp readings
- Rechargeable lithium ion battery allows for a for a full work day (10+ hours) under normal conditions
- Auto power off to save battery power
- Size (H x L x W): 216 mm x 94 mm x 57 mm
- Weight: 0,794 kg
- Warranty: three years

This is a thermal image of an 80 V battery. After thermal analysis, it turned out that a bad connector on this battery was causing battery failure. Through the free supplied software, it has become clear that the average battery temperature was 22 °C, and that this temperature climbed to 62 °C in the vicinity of the bad connector. There shouldn't be a temperature difference within one and the same battery, so this definitely needs to be repaired.

**Fluke BT521 BATTERY ANALYSER**

The Fluke 521 Battery Analyser is the ideal test tool for maintenance, troubleshooting and performance testing of individual stationary batteries and battery banks used in critical battery back-up applications.

The intuitive user interface, compact design and rugged construction, ensure optimum performance, reliability and detailed test results. Fluke BT521 offers various battery test functions ranging from DC voltage and resistance tests to full condition testing. It uses automated string function testing and an integrated infra-red test probe temperature measurement system.

It is designed for measurements on stationary batteries including GEL, AGM and float open cells.

## DIGITAL DENSITY METER

**Features:**

- Robust housing
- Ideal for fast measuring routines
- Direct measurement out of the storage container
- Only 2 ml of sample needed for measurement
- Perfect traceability of results
- Inspection window to check if your sample contains bubbles or not
- Bluetooth data transfer to your PC

**Specifications:**

- Measuring range:
  - Density: 0 g/cm<sup>3</sup> to 3 g/cm<sup>3</sup>
  - Temperature: 0 °C to 40 °C
- Sample volume: 2 ml
- Dimensions (L x W x H): 245 x 103 x 126 mm
- Internal storage: 1024 measured results, 250 sample IDs, 30 measuring methods
- Power supply: 3 AA batteries
- Weight: 660 g
- Immediately temperature compensation to 25 °C

**BDX BATTERY DISCHARGER/ANALYSER**

The BDX is an **automatic battery discharger/analyser**, designed to test the efficiency of industrial batteries of any type, voltage and capacity. This equipment can be programmed to discharge the battery with a precisely controlled constant current, adjustable from zero to the maximum rated value, while keeping the battery voltage under control.

**General information:**

- High-frequency IGBT regulator, featuring constant current discharge of the battery
- Rugged construction
- Compact and portable design
- Wide power range available – battery voltages up to 600 VDC and discharge currents up to 600 A
- Intelligent electronic protection system
- Programmable digital board, controlled by microprocessor
- Can operate with batteries of any type
- Digital display (battery voltage and current, time, capacity discharged, programmed values)
- CE-certified
- USB-connection
- Free analysing software provided (graphs of voltage, Ah and time)

**AC input standard voltage:**

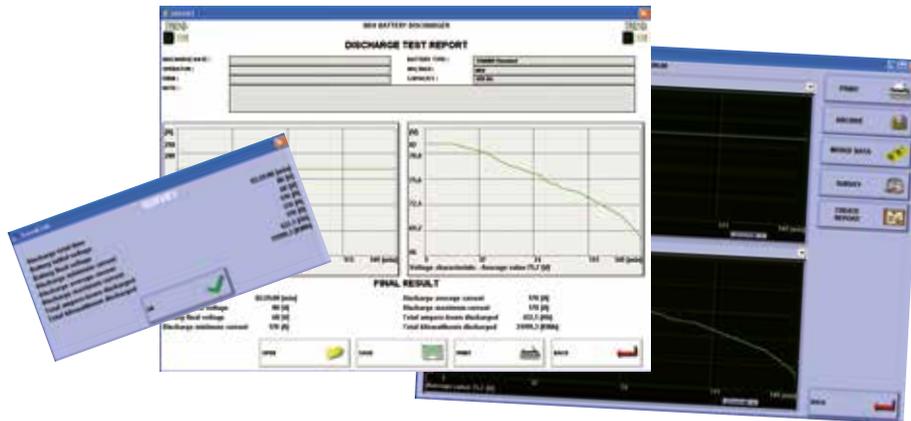

- Voltage range: 85-135 or 180-250 VAC
- Single-phase
- Maximum power: 250 W
- 50/60 Hz
